

Engineering Curves: Construction of Hypocycloid

Rolling Circle Method with Tangent & Normal

Gajavada Sanjeevkumar

September 9, 2026

Problem Statement

Problem

Draw a hypocycloid of a circle of diameter 50 mm, which rolls inside a circular arc of radius 85 mm for one revolution. Also, draw a tangent and a normal to the epicycloid at a point 50 mm from the centre of the directing circle.

Calculated Data

$$R = 85 \text{ mm},$$

$$OC_0 = R - r = 85 - 25 = 60 \text{ mm},$$

$$\angle AOB = 360^\circ \frac{r}{R} = 360^\circ \frac{25}{85} = 105.882353^\circ,$$

$$\Delta\theta = \frac{105.882353^\circ}{12} = 8.823529^\circ,$$

$$r = \frac{50}{2} = 25 \text{ mm},$$

$$AC_0 = 25 \text{ mm},$$

Generating-circle division = 30° .

Step 1: Draw OA

$OA = 85 \text{ mm.}$

Step 2: Draw OB at 105.88°

$$\angle AOB = 105.88^\circ.$$

Step 3: Draw the directing arc AB

Blue arc AB : directing circle.

Step 4: Locate C_0 and the generating circle

$OC_0 = 60$ mm.
 $AC_0 = 25$ mm.
Green: generating circle.

Step 5: Divide the generating circle into 12 equal parts

Green: generating circle.
Clockwise 30° divisions.

Step 5: Divide the generating circle into 12 equal parts

Step 5: Divide the generating circle into 12 equal parts

Green: generating circle.
Clockwise 30° divisions.

Step 5: Divide the generating circle into 12 equal parts

Green: generating circle.
Clockwise 30° divisions.

Step 5: Divide the generating circle into 12 equal parts

Step 5: Divide the generating circle into 12 equal parts

Step 5: Divide the generating circle into 12 equal parts

Green: generating circle.
Clockwise 30° divisions.

Step 5: Divide the generating circle into 12 equal parts

Step 5: Divide the generating circle into 12 equal parts

Step 5: Divide the generating circle into 12 equal parts

Step 5: Divide the generating circle into 12 equal parts

Step 5: Divide the generating circle into 12 equal parts

Step 6: Complete the generating-circle divisions

Step 7: Draw concentric construction arcs

Construction arcs centered at O .
Equal-radius pairs are used.

Step 7: Draw concentric construction arcs

Construction arcs centered at O .
Equal-radius pairs are used.

Step 7: Draw concentric construction arcs

Step 7: Draw concentric construction arcs

Step 7: Draw concentric construction arcs

Step 7: Draw concentric construction arcs

Step 7: Draw concentric construction arcs

Step 8: Draw the centre arc through C_0

Step 9: Divide $\angle AOB$ into 12 equal parts

Step 9: Divide $\angle AOB$ into 12 equal parts

8.823529^o divisions.

Step 9: Divide $\angle AOB$ into 12 equal parts

8.823529° divisions.

Step 9: Divide $\angle AOB$ into 12 equal parts

8.823529° divisions.

Step 9: Divide $\angle AOB$ into 12 equal parts

8.823529° divisions.

Step 9: Divide $\angle AOB$ into 12 equal parts

8.823529° divisions.

Step 9: Divide $\angle AOB$ into 12 equal parts

8.823529° divisions.

Step 9: Divide $\angle AOB$ into 12 equal parts

8.823529° divisions.

Step 9: Divide $\angle AOB$ into 12 equal parts

Step 9: Divide $\angle AOB$ into 12 equal parts

Step 9: Divide $\angle AOB$ into 12 equal parts

Step 9: Divide $\angle AOB$ into 12 equal parts

Step 9: Divide $\angle AOB$ into 12 equal parts

Step 10: Complete the angular divisions and centre points

Step 11: Draw the cutting arc and locate P_i

Step 11: Draw the cutting arc and locate P_i

Step 11: Draw the cutting arc and locate P_i

Step 11: Draw the cutting arc and locate P_i

Step 11: Draw the cutting arc and locate P_i

Step 11: Draw the cutting arc and locate P_i

Step 11: Draw the cutting arc and locate P_i

Step 11: Draw the cutting arc and locate P_i

Step 11: Draw the cutting arc and locate P_i

Step 11: Draw the cutting arc and locate P_i

Step 11: Draw the cutting arc and locate P_i

Step 11: Draw the cutting arc and locate P_i

Step 11: Draw the cutting arc and locate P_i

Step 12: Draw the hypocycloid

Step 13: Locate P at 50 mm from O

The 50 mm construction arc from O extends beyond both intersections with the hypocycloid. P is selected on the right-hand branch.

Step 14: Draw the 25 mm radius to C_p

Step 15: Extend OC_p to the directing arc AB and mark the intersection M

Step 16: Mark M on the directing circle

Step 17: Draw the normal NN' through P

Step 18: Draw the tangent TT' perpendicular to NN'

$TT' \perp NN'$ at P .

Step 19: Show the right angle at P

Right angle at P .

Step 20: Final completed hypocycloid construction
